Systems Analysis and Design With UML 2.0
An Object-Oriented Approach, Second Edition

Chapter 2:

Introduction to Object-Oriented Systems
Analysis & Design with the Unified Modeling
Language

Slide 3

Objectives

- Understand the basic characteristics of object-oriented systems.
- Be familiar with the Unified Modeling Language (UML), V.2.0.

Slide 4

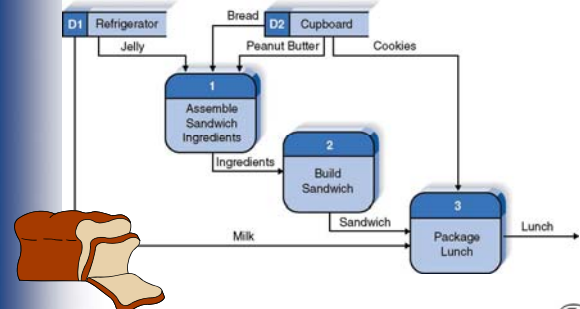

Non-Object-Oriented...

- Process models
 - Based on behaviour and actions
- Data Models
 - Based on static (fixed) representations of data

Slide 8

Data Modelling:

Entity-Relationship Diagrams (ERDs)

Slide 9

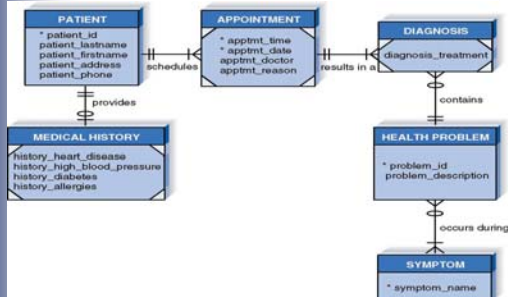

What Is an ERD?

- A picture showing the information created, stored, and used by a business system.
- Entities generally represent people, places, and things of interest to the organization.
- Lines between entities show relationships between entities.

Entities and Instances

Slide 12

Object-Oriented Approaches

- Combine processes and data
- Are more 'natural'

Slide 13

Basic Characteristics of Object Oriented Systems

- Classes and Objects
- Methods and Messages
- Encapsulation and Information Hiding
- Inheritance
- Polymorphism

Slide 14

Helpful Hint....'Compile'

- C Classes
- O Objects
- M Methods and Messages
- P Polymorphism
- I Inheritance
- (Last, but not least)
- E Encapsulation

Slide 15

Classes and Objects

- Class – Template to define specific instances or objects
- Object – Instantiation of a class
- Attributes – Describes the object
- Behaviours – specify what object can do

Slide 16

Classes and Objects

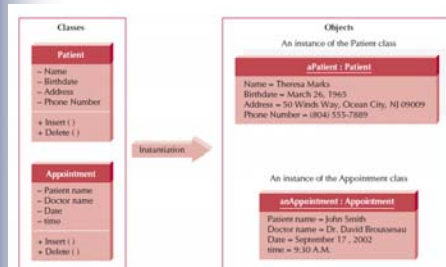

FIGURE 2-1 Classes and Objects

Slide 17

Methods and Messages

- Methods implement an object's behaviour
 - Analogous to a function or procedure
- Messages are sent to trigger methods
 - Procedure call from one object to the next

Slide 18

Messages and Methods

FIGURE 2-2 Messages and Methods

Slide 19

Encapsulation and Information Hiding

- Encapsulation
 - combination of data and process into an entity
- Information Hiding
 - Only the information required to use a software module is published to the user
- Reusability is the Key Point
 - an object is used by calling methods

Slide 20

Inheritance

- Superclasses or general classes are at the top of a hierarchy of classes
- Subclasses or specific classes are at the bottom
- Subclasses inherit attributes and methods from classes higher in the hierarchy

Slide 21

Class Hierarchy

FIGURE 2-3 Class Hierarchy

Slide 22

Inheritance

FIGURE 2-4 Inheritance

Slide 23

Polymorphism

- A message can be interpreted differently by different classes of objects
- e.g. A 'Create_Record' message is essentially the same thing, but causes 'Create_Patient_Record' by a 'Patient_Database' object, or 'Create_Doctor_Record' by a 'Healthcare_Staff_Database' object

Slide 25

Benefits of the Object Approach

Concept	Supports	Leads to
Classes, objects, methods, and messages	<ul style="list-style-type: none"> ■ A more realistic way for people to think about their business ■ Highly cohesive units that contain both data and processes 	<ul style="list-style-type: none"> ■ Better communication between user and analyst-developer ■ Reasonable objects ■ Benefits from having a highly cohesive system (see cohesion in Chapter 13)
Encapsulation and information hiding	<ul style="list-style-type: none"> ■ Loosely coupled units 	<ul style="list-style-type: none"> ■ Reasonable objects ■ Fewer ripple effects from changes within an object or in the system itself ■ Benefits from having a loosely coupled system design (see coupling in Chapter 13)
Inheritance	<ul style="list-style-type: none"> ■ Allows us to use classes as standard templates from which other classes can be built 	<ul style="list-style-type: none"> ■ Less redundancy ■ Easier creation of new classes ■ Standard and consistency within and across development efforts ■ Ease in supporting exceptions
Polymorphism and Dynamic Binding	<ul style="list-style-type: none"> ■ Minimal messaging that is interpreted by objects themselves 	<ul style="list-style-type: none"> ■ Simpler programming of events ■ Ease in replacing or changing objects in a system ■ Fewer ripple effects from changes within an object or in the system itself
Use-case driven and use cases	<ul style="list-style-type: none"> ■ Allows users and analysts to focus on how a user will interact with the system to perform a single activity 	<ul style="list-style-type: none"> ■ Better understanding and gathering of user needs ■ Better communication between user and analyst
Architecture centric and functional, static, and dynamic views	<ul style="list-style-type: none"> ■ Viewing the evolving system from multiple points of view 	<ul style="list-style-type: none"> ■ Better understanding and modeling of user needs ■ More complete depiction of information system
Iterative and incremental development	<ul style="list-style-type: none"> ■ Continuous testing and refinement of the evolving system 	<ul style="list-style-type: none"> ■ Meeting real needs of users ■ Higher quality systems

WILEY

The Unified Modelling Language, Version 2.0

- Functional Diagrams
- Structure Diagrams
- Behaviour Diagrams
 - Developers
 - ◆ Grady Booch
 - ◆ Ivar Jacobson
 - ◆ James Rumbaugh

Slide 27

Functional Diagrams

- Activity Diagrams
 - Illustrate business workflows
- Use-Case Diagrams
 - Capture business requirements
 - Illustrates interaction between system and environment

Slide 28

Structure Diagrams

- Class diagrams
 - relationship between classes
- Object diagrams
 - Relationships between objects

Slide 29

Behaviour Diagrams

- Interaction Diagrams
 - Sequence diagrams
 - ◆ Show Time-based ordering and behaviour of objects and their activities
- State Machines ...
 - Behavioural State Machines (Statechart diagrams)
 - ◆ Examines behaviour of one class/object

Slide 30

Object Oriented Systems Analysis and Design

- Use-case driven
- Iterative and Incremental
- Often associated with PHASED Development (a RAD methodology)

Slide 31

Basic Method for Development of Object Oriented Systems

- Identifying business value
- Analyze feasibility
- Develop workplan
- Staff the project
- Control and direct project
- Requirements determination
- Functional modelling
- Structural modelling
- Behavioural modelling
- Moving on to design

Slide 32

Summary

- Process oriented (Data flow diagrams) and Data oriented (Entity relationship diagrams)
- Basic characteristics of Object Oriented Systems Analysis and Design
- Introduction to Unified Modelling Language and the Unified Process
